# onetelip

# Linksys PAP2T gateway configuration guide of line 2 with Netelip service.

This manual explain how to configure phone 2 of your Linksys PAP2T gateway and connect it with netelip service to make and receive calls.

### Step 1

After connecting router and a second telephone cable in your line2, check lights of phone2 and Ethernet are illuminated.

#### Step 2

Obtain your gateway IP address. For that, dial with your telephone \*\*\*\*110#. A voiceover will indicate you the address.

Enter the IP in your browser like this: http://192.168.XXXXX

Now you can access to your PAP2 to configure Line 2.

#### Step 3

Firstly, you will see a previous window that will redirect you to your Linksys panel.

PAP2 is updating your configuration. Unit may reset. You will be redirected to the configuration page in 5 seconds. If not, you can click <u>HERE</u> to return to the configuration page

Wait some seconds while your browser open a new tab.

Linksys PAP2 Update Co... 🔯

## o netelip

### Step 4

Access to Line 2 and fill out the following fields:

NAT MAPPING ENABLE:YES NAT KEEP ALIVE: YES SIP PORT: 5061 (in Line 1 must appear 5060 port) PROXY: sip.netelip.com PASSWORD: Your SIP password USER ID: Your SIP user

Basically, check that fields filled out in line 2 are the same than in line 1.

\*\*If you are configuring an extension of your Hosted PBX, please insert as proxy server: **vpbx.netelip.com**
